

Pilot Feedback Form

Agent Failure Lab 1: Instructor and Course Evaluation

OpsMail Assistant: Indirect Prompt Injection via Poisoned Inbox

Purpose of This Form

This feedback form is designed to evaluate whether Agent Failure Lab 1 is ready for broader university course adoption. It focuses on preparation time, technical friction, student engagement, assessment quality, and the value of the hosted platform model.

1. Respondent Information

Field	Response
Instructor name	
Institution	
Course name	
Course level	☐ Undergraduate ☐ Master's ☐ PhD
	☐ Professional/Workshop
Course type	☐ Cybersecurity ☐ AI/ML Security ☐ Software Engineering ☐ Privacy ☐ Other
Number of students who attempted the lab	
Delivery mode	☐ In person ☐ Remote ☐ Hybrid ☐ Homework
Date of pilot	

2. Pilot Context

2.1 How was the lab used?

Select all that apply.

- ☐ In-class practical exercise
- ☐ Homework assignment
- ☐ Graded assessment
- ☐ Optional enrichment activity
- ☐ Workshop activity
- ☐ Demonstration followed by discussion
- ☐ Teaching assistant trial only

- ☐ Instructor-only evaluation
- ☐ Other: _____

2.2 Where did the lab fit in your course?

- ☐ Prompt injection / LLM security module
- ☐ AI security / ML security module
- ☐ Secure software engineering module
- ☐ Privacy or sensitive-data handling module
- ☐ Threat modeling module
- ☐ Incident response or trace-analysis module
- ☐ Emerging threats lecture
- ☐ Other: _____

3. Preparation Time and Instructor Workload

3.1 Instructor Preparation Time

Estimate the time required to prepare for the lab.

Preparation Activity	Estimated Time Spent
Reading product overview and syllabus mapping	_____ minutes
Reviewing student handout	_____ minutes
Reviewing instructor guide	_____ minutes
Reviewing rubric/sample report	_____ minutes
Testing the lab as instructor/TA	_____ minutes
Preparing course-specific instructions	_____ minutes
Answering student setup questions before lab	_____ minutes
Other preparation	_____ minutes
Total preparation time	_____ minutes

3.2 Estimated Prep Time Saved

Compared with building or adapting your own AI security lab, how much instructor or TA preparation time did Agent Failure save?

- ☐ 0 hours
- ☐ 1–2 hours

- ☐ 3–5 hours
- ☐ 6–10 hours
- ☐ More than 10 hours
- ☐ Not sure

3.3 Instructor Workload Ratings

Rate each item from 1 to 5.

Statement	1	2	3	4	5
The pilot pack reduced my preparation burden.	☐	☐	☐	☐	☐
The student handout was sufficient for students to begin.	☐	☐	☐	☐	☐
The instructor guide helped me support the lab.	☐	☐	☐	☐	☐
The rubric made grading more objective.	☐	☐	☐	☐	☐
The sample report clarified expected student output.	☐	☐	☐	☐	☐
The hosted platform reduced setup work compared with local deployment.	☐	☐	☐	☐	☐

Scale: 1 = strongly disagree, 5 = strongly agree.

4. Technical Friction and Environment Reliability

4.1 Student Setup Issues

How many students experienced each issue?

Issue	Number of Students Affected
Could not access website	_____
Could not log in or join class	_____
Browser compatibility issue	_____
Campus network/firewall issue	_____
Lab did not start	_____
Session/container crashed	_____
Trace stream did not update	_____
Email did not appear in inbox	_____
Agent response was delayed or failed	_____
Student lost progress	_____
Other technical issue	_____

4.2 Environment Error Rate

Estimate the percentage of students who required instructor or TA help due to technical setup or environment issues.

- ☐ 0%
- ☐ 1–5%
- ☐ 6–10%
- ☐ 11–20%
- ☐ 21–40%
- ☐ More than 40%

4.3 Comparison to Traditional Local Labs

Compared with a local setup lab requiring Docker, Python, VMs, or command-line tooling, the environment error rate was:

- ☐ Much lower
- ☐ Somewhat lower
- ☐ About the same
- ☐ Somewhat higher
- ☐ Much higher
- ☐ Not applicable / no comparison

4.4 Technical Reliability Ratings

Statement	1	2	3	4	5
Students could access the platform with minimal friction.	☐	☐	☐	☐	☐
The lab environment was reliable during the session.	☐	☐	☐	☐	☐
The hosted model reduced local environment errors.	☐	☐	☐	☐	☐
The trace/event interfaces worked reliably enough for teaching.	☐	☐	☐	☐	☐
Technical issues were easy to diagnose or work around.	☐	☐	☐	☐	☐

Scale: 1 = strongly disagree, 5 = strongly agree.

5. Student Engagement and Learning

5.1 Observed Student Engagement

Estimate the level of student engagement during the lab.

- ☐ Very low

- ☐Low
- ☐Moderate
- ☐High
- ☐Very high
- ☐Not observed

5.2 Engagement Indicators

How many students or groups showed the following behaviors?

Observed Behavior	Approximate Count or Percentage
Completed the exploit objective	_____
Reached partial success	_____
Used trace evidence meaningfully	_____
Asked conceptual questions about prompt injection	_____
Asked questions about mitigations	_____
Got stuck on UI or environment rather than concept	_____
Worked beyond the minimum requirement	_____
Discussed real-world implications	_____

5.3 Learning Outcome Ratings

Rate the extent to which the lab helped students learn the following.

Learning Outcome	1	2	3	4	5
Indirect prompt injection	☐	☐	☐	☐	☐
Difference between direct and indirect attacks	☐	☐	☐	☐	☐
Trust-boundary failure	☐	☐	☐	☐	☐
Instruction/data separation	☐	☐	☐	☐	☐
Sensitive-data disclosure	☐	☐	☐	☐	☐
AI agent tool-use risk	☐	☐	☐	☐	☐
Trace-backed evidence collection	☐	☐	☐	☐	☐
System-level mitigation design	☐	☐	☐	☐	☐

Scale: 1 = not at all, 5 = very strongly.

6. Assessment and Grading

6.1 Report Quality

If students submitted reports, how would you characterize the submissions?

- ☐Most students produced strong trace-backed reports.

- ☐ Many students completed the exploit but needed more support in analysis.
- ☐ Many students understood the concept but lacked evidence.
- ☐ Many students struggled to complete the exploit.
- ☐ Reports were not collected.
- ☐ Not applicable.

6.2 Rubric Usefulness

Statement	1	2	3	4	5
The rubric made grading faster.	☐	☐	☐	☐	☐
The rubric made grading more consistent.	☐	☐	☐	☐	☐
The criteria were objective enough for teaching assistants to apply.	☐	☐	☐	☐	☐
The sample report helped calibrate expectations.	☐	☐	☐	☐	☐
The trace evidence made student claims easier to verify.	☐	☐	☐	☐	☐
The deliverable was appropriate for the course level.	☐	☐	☐	☐	☐

Scale: 1 = strongly disagree, 5 = strongly agree.

6.3 Estimated Grading Time

Estimate grading time per student submission.

- ☐ Less than 5 minutes
- ☐ 5–10 minutes
- ☐ 11–15 minutes
- ☐ 16–20 minutes
- ☐ More than 20 minutes
- ☐ Not applicable

7. Curriculum Fit

7.1 Fit With Course Goals

Statement	1	2	3	4	5
The lab fit naturally into my course.	☐	☐	☐	☐	☐
The lab covered a topic I otherwise struggle to teach hands-on.	☐	☐	☐	☐	☐
The lab aligned with my assessment goals.	☐	☐	☐	☐	☐
The lab connected well to existing cybersecurity concepts.	☐	☐	☐	☐	☐
The lab connected well to emerging AI security concerns.	☐	☐	☐	☐	☐
The standards/syllabus mapping was useful for adoption.	☐	☐	☐	☐	☐

Scale: 1 = strongly disagree, 5 = strongly agree.

7.2 Where Would You Place This Lab?

Select the best fit.

- ☐ Early course introduction
- ☐ After threat modeling
- ☐ After secure software design
- ☐ During prompt injection / LLM security
- ☐ During privacy or sensitive-data handling
- ☐ During incident response or trace analysis
- ☐ As a capstone warm-up
- ☐ As an optional enrichment lab
- ☐ I would not include it

8. Adoption Likelihood

8.1 Future Use

How likely are you to use Agent Failure Lab 1 again?

- ☐ Very unlikely
- ☐ Unlikely
- ☐ Unsure
- ☐ Likely
- ☐ Very likely

8.2 Recommendation

How likely are you to recommend Agent Failure to another instructor?

- ☐0 ☐1 ☐2 ☐3 ☐4 ☐5 ☐6 ☐7 ☐8 ☐9 ☐10

Scale: 0 = not at all likely, 10 = extremely likely.

8.3 Adoption Conditions

What would need to change before you would adopt this in a course?

- ☐More labs
- ☐LMS integration
- ☐University SSO
- ☐More instructor controls
- ☐More detailed grading export
- ☐Stronger privacy/security documentation
- ☐More theory slides
- ☐Easier student onboarding
- ☐Lower cost
- ☐Nothing; it is usable as-is
- ☐Other: _____

9. Quantitative Summary

Please provide your best estimates.

Metric	Estimate
Total number of students participating	_____
Percentage who accessed the platform successfully	_____%
Percentage who completed the lab objective	_____%
Percentage who required technical help	_____%
Percentage who required conceptual help	_____%
Average hands-on completion time	_____ minutes
Estimated instructor prep time saved	_____ hours
Estimated TA/support time required during lab	_____ minutes
Estimated grading time per report	_____ minutes

10. Open-Ended Feedback

10.1 What worked best?

10.2 What caused the most friction?

10.3 Which student misconceptions appeared most often?

10.4 Which part of the pilot pack was most useful?

10.5 Which part of the pilot pack was least useful or missing?

10.6 What would make the lab easier to adopt next semester?

10.7 What additional labs would be most valuable?

11. Permission for Follow-Up

- ☐ I am willing to provide a short follow-up interview.
- ☐ I am willing to provide anonymized feedback for product improvement.
- ☐ I am willing to be contacted about future Agent Failure labs.
- ☐ I may be willing to provide a testimonial after further review.

Preferred contact email:

12. Internal Pilot Analysis Notes

For Agent Failure Team Use

After collecting this form, summarize the pilot using measurable adoption criteria:

- preparation time saved;
- percentage of students with environment issues;
- percentage of students completing the exploit;
- percentage of students using trace evidence correctly;
- average grading time;
- instructor likelihood of reuse;
- top three friction points;
- top three requested improvements.

13. End of Pilot Feedback Form
